GRI CONTENT INDEX

102-16	Organization's values and code of conduct	see page 12ff, 30f, 38f Code of conduct: www.A1.group/en/group/compliance-guidelines
Governa	ance	
102-18	Governance structure	Since 2010, A1 Telekom Austria Group has been using a group-wide, integrated sustainability management system. A Corporate Sustainability Team, as part of Group Communiations and Sustainability, reports directly to the CEO. With the introduction of an internal social media platform, A1 Telekom Austria Group established a digital group-wide knowledge platform and communicates and coordinates its activities through it. There is no separate committee for decision-making on ecologic and social topics. With respect to committees on economic decisions please refer to the Corporate Governance.
Stakoho	older engagement	
	List of incorporated stakeholder groups	Employees, customers, suppliers, the economy, politicians & special interest groups, media, the scientific, reasearch & education communities. see also www.A1.group/en/csr/sustainability-strategy
102-41	Collective bargaining agreements	Around 50% of all employees are covered by the provisions of collective bargaining agreements. National requirements are observed at all subsidiaries. see also page 30ff
102-42	Basis for identifying and selecting stakeholders	All groups that are impacted by A1 Telekom Austria Group's regular business activity form the basis for stakeholder identification. Stakeholder selection was based on priorisation via internal databases.
102-43	Approach to stakeholder involvement and whether stakeholders have been involved in report preparation	see page 15f
102-44	Key topics and concerns raised by stakeholders	As a result of antoher materiality analysis in the spring of 2017, the topics of data security and protection as well as communication infrastructure emerged as the most important ones. Both customers and suppliers rank data security and protection as the most significat one. Employees, on the other hand, regard fair and flexible working as the most important topic. Overall, stakeholders give topics such as waste and employee health less priority.

GRI CONTENT INDEX

102-45	Entities included in the consolidated financial statements	see consolidated financial statements 2018
102-46	Defining report content and topic boundaries	Boundaries for material topics were defined according to an impact assessment inside and/or outside the organization. A1 Telekom Austria Group's ability to influence the topic was considered as well. see also A1.group/en/csr/sustainability-strategy
102-47	List of material topics	see page 16
102-48	Restatements of information	No re-phrasing of information from past reports took place.
102-49	Changes in reporting	No changes to the extent and topical boundaries compared to earlier reporting periods.
102-50	Reporting period	Full year 2018 if not stated otherwise. Environmental KPI's were collected for the period 01 November 2017 to 31 October 2018 and can be considered as representative for the full year 2018.
102-51	Date of most recent report	The report for the 2017 periode was published in April 2018.
102-52	Reporting cycle	The combined Annual Report is published once a year.
102-53	Contact point for questions regarding the report	see page 5
102-54	Report of the "in-accordance"-option	The report was published with reference to the GRI Standards.
102-55	GRI content index	see page 164ff
102-56	External assurance	An external assurance is planned within the next two years.

418-1	Number of substantiated complaints concerning breaches of customer privacy and loss of customer data	see page 26

Sustainability KPIs

Environment

Calculation Method - Emissions

In its calculation method for direct, indirect and other indirect emissions, A1 Telekom Austria Group follows the internationally recognised definition of the Greenhouse Gas Protocol of the WRI/WBCSD (World Resources Institute and World Business Council for Sustainable Development). Included in the calculation for direct emissions are all greenhouse gases,not just those covered by the Kyoto Protocol. The calculation methods are based on data published by ecoinvent (AR4 100-year (IPCC 2007-4th Assessment Report)). Figures given as $\rm CO_2$ equivalents. Nature of gases and source of emission factors and of Global Warming Potentials (GWP) reported by energy providers for Scope 2 emissions as well as calculated Scope 3 emissions are unknown. The base year according to GRI is not relevant to A1 Telekom Austria Group.

Calculation Method - Energy

The calculation method is — as long as self provision is not concerned — based on the invoices issued by the respective energy providers. For the conversion into kilowatt hours factors of the ecoinvent database have been taken into account. When data was not available, estimates were made in some cases. Furthermore, term inaccuracies may occur if invoices do not exactly match the reporting period. For the energy share of fuels the heating value was considered. Neither steam nor cooling energy was purchased.

Direct Scope 1 includes direct emissions from combustion of fossil fuels; emissions from cooling agents are not considered. Indirect Scope 2 includes indirect emissions from electric energy and district heating. Scope 3 takes into account the following emissions, which are not included in Scope 2: The costs associated with the upstream emissions from heating energy, electricity and fuels (fleet) and business travel (taxi, plane, train). These upstream emissions have been calculated according to ecoinvent. Emissions from the downstream use of customers' mobile phones: For the three best-selling devices per subsidiary, a battery voltage of 3.7 volts (V) was assumed and multiplied by the battery capacity [mAh] according to the manufacturer (mAh*V/1,000) = Wh). This is equivalent to the electricity demand per charge cycle per mobile phone. Assuming that a mobile phone is charged once a day, the electricity demand has then been extrapolated for the whole year and subsequently the average electricity demand for the three best-selling devices per subsidiary was determined. These values were multiplied with the number of SIM cards in circulation for each subsidiary.

1) In Slovenia market based scope 2 emissions rose due to changes in the calculation method-for the first time the calculations were based on energy suppliers' emissinos.

Vehicle fleet

	Number of	Consumption of	Consumption of	Cons. of alternative	Mileage
A1 Telekom Austria Group	vehicles	petrol (in I)	diesel (in I)	fuels (in I)	(in thousand km)
